

I appreciate the F.C.C.'s support of local low power fm stations. Unfortunately, one of our local lpfm stations, WPVM is dealing with massive interference from a non-local station with the same band number. It is difficult to receive the station and the signal does not reach many local listeners who would like to tune in. Our mountain terrain causes challenges in receiving the signal and I understand that the F.C.C. can help alleviate some of these challenges. I request that you do so.
